

Amendments to Claims

Please amend the claims as follows:

Claims 1-10. (canceled)

Claim 11. (previously presented) A system for evaluating the condition of an item, the system comprising the components of:

- a sensor chamber including an interior area for housing an evaluation item, the interior area including a plurality of sensors;

- a controller that is communicatively coupled to the plurality of sensors and operative to control the operation of the plurality of sensors and obtain data readings from the plurality of sensors, wherein the controller is operable to detect when the evaluation item is placed into the interior of the sensor chamber;

- an information acquisition engine operable to receive information regarding the evaluation item;

- a database containing expected results pertaining to the evaluation item; and

- a damage calculator that is operable to compare the data readings from the plurality of sensors and the expected results from the database to identify particular characteristics pertaining to the evaluation item.

Claims 12-20. (canceled)
